

Nike Sales Dashboard Project Summary

This project is an interactive sales dashboard created using Microsoft Excel to analyze Nike retail sales performance across different products, regions, retailers, sales methods, and states. The dashboard helps visualize sales trends, units sold, and overall business performance using charts, KPI cards, and slicers.

Project Objectives

• Analyze total sales and units sold.
• Compare product category performance.
• Track sales across states and regions.
• Evaluate retailer and sales method contribution.
• Create an interactive dashboard for quick business insights.

Tools & Features Used

Microsoft Excel Pivot Tables Pivot Charts Slicers KPI Cards Dashboard Design & Formatting Data Cleaning & Aggregation

Sales Value Dashboard

Key Insights

Men's Street Footwear generated the highest sales value. In-store sales contributed a significant portion of total sales. Sales performance varied considerably between states. The dashboard enables dynamic filtering using slicers. KPI cards provide quick access to important business metrics.

Conclusion

This project demonstrates practical data analysis and dashboard-building skills using Excel. It showcases the ability to transform raw sales data into meaningful business insights through visualization, reporting, and interactive dashboard techniques.
